Sprint Report II

What functionality our system has

Our system has an interface, search bar and categories tab on the main page. In this sprint we added login page and profile and making a comment section and create a library tab. We also added a simple "publish a book" tab but we need to improve it's contens. Our system is almost fully functional.

User stories that we implemented to system

Creating a Library
I am a student who likes to collect different books of a different series. I can call myself a collector. But it can be a difficult thing because sometimes I can't find the books I want or some books are not being printed anymore. This makes my hobby very unplesant. That is why I joined the Di-Lib. On the system I can find every book a want and I can build my own digital library. I can collect the books I looking for easily. Di-Lib helped me a lot.
Story priority : Medium

Making a Comment
I am a critic of a some newspaper. I am sharing my own comments on my page. But my comments can not be read by majority. Not everyone is reading the newspaper that I write. When I heard I can share my comments on Di-Lib I registered the system so now I can share my comments about the books on my page and with that I can reach much more people than newspapers. This is a whole new level for my job.
Story priority : High

Publishing a Book
I am a amator writer. For many years I wrote many books but none of them has been published. Publishers didn't like my books or they think they couldn't earn much money. This made me very upset for many years. But some time ago I heard a app that named Di-Lib. I found I can publish my books on the system online and I registered and published my books. People loved them. They posted thousands of good review to my books. With the help of Di-Lib I published my books.
Story priority : High

What we learned

We learned some works takes more time than we expected and we need to work harder fort hat. We learned how to make a better design for users. We learned the challenges of the building a new tabs and workspaces and connect them with each other.

List of all user stories yet to be implemented

None

Subset of user stories to be implemented during the next sprint

We implemented all

As we told in the first sprint our system has everything that we decided to do at the beginning. We implemented all of the user stories to our system. There was no any other user story we consider to add during or between sprints
